

AN INVENTION RE-IMAGINED!

Museums are filled with tools & products that have evolved over time, all because someone brilliant asked questions such as "how can we make this easier to use? Faster? Smaller? Better for the environment?"

Your challenge is to find a device in your home - a toy, device, machine, etc.- and brainstorm how it could be improved? Use the next two pages to imagine how this invention could evolve, and what it could look like in the year 2050!

What is the invention you've chosen, and what does it do?

What is it's best feature?

What's something frustrating, awkward, and/or harmful to the environment about this invention?

Explain how you think this invention could be improved? What do you think it will be like in 2050?
